

## **EEX to introduce next T7 release (9.1) on 28 June 2021**

Dear trading participant,

EEX will update its Derivatives Trading System Eurex T7 to version 9.1 on 28 June 2021, in line with the Eurex Exchanges' release cycle. In the framework of the release, interface changes will take place and technical enhancements are introduced which are described in more detail in the Eurex system documentation.

EEX will ensure the compatibility of the supported trading front-ends Trayport Joule© and EEX TT Screen.

### **Important dates:**

- **Simulation Start: 03 May 2021**
- **Connection Test: 26 June 2021**
- **Production Start: 28 June 2021**

### **Functional Changes**

Shortly after the launch of version 9.1, contract generation will be taken over by the T7 trading platform in the context of decommissioning the Eurex legacy system. T7 will therefore be able to publish additional information including new contract-specific reference data, which will be

published via the Eurex Reference Data Interface in fields introduced in T7 Release 9.0 already.

Please do not hesitate to contact us if you should have questions.

Yours sincerely,

EEX Market Operations
