

## Extension of EEX EOD Index to NBP

Dear Trading Participant,

EEX AG is **extending its End of Day Index (EEX EOD) to NBP**, the UK market area. From 23 March 2023, the NBP EOD will be published alongside all other market areas. The NBP EOD follows the current methodology of Gas Spot EOD indices and will be published on the EEX website as well as in EEX Group DataSource services.

The introduction of the EOD Index reflects the EEX NBP spot volumes evolution recently observed: more than 58 TWh were traded in 2022, representing a twelve-fold increase compared to 2021. An even stronger dynamic is observed in 2023, making the EEX NBP spot one of the most liquid gas market areas and the need for an EOD NBP obvious. For similar reasons, EEX will also extend the EESI for the NBP at a later stage.

### Europe's most transparent natural gas indices

With the extension of EOD to NBP, EEX AG is building markets together with its trading participants.

Thanks to a total of six natural gas spot indices, each tailored to specific market needs, EEX AG provides Europe's most transparent and trustworthy natural gas reference prices. Being based on thousands of on-screen exchange trades from more than 200 active market participants, EEX AG's indices are robust, transparent, and reliable.
