Increasing Market Transparency in a Constantly Changing Business

“In these times of high volatility, the need for transparency of market price is key. Through our data services offering, customers are able to fully view, analyse and track market price.”

Dr Tobias Paulun  
Chief Strategy Officer

Welcome to the latest edition of Data Insights, brought to you by the Market Data Services team here at EEX.

As a company, EEX prides itself on providing the best data services and market transparency which helps our customers to make more informed trading decisions - be that through our “DataSource” offering or by accessing our “Transparency Platform”.

Of course, in a business that is constantly changing, it can sometimes be challenging to find the best solutions. However, thanks to our customer community “InsightCommodity”, we continue to work together with our industry partners to find the right solutions which enable us to make sure
we provide the best possible service for you.

This newsletter celebrates some of our and our customers’ most recent achievements. If you would like to know more about our Market Data Services offering, please feel free to contact Erik, Anika or Ines.

Happy Reading!

Tobias Paulun

DataSource – Customised Solutions for the Disclosure of Pricing

The EU electricity directive requires member states to increase price transparency for all customers (Electricity directive - §35 (comparison portal) - §56 (access to price for consumer)).

DataSource’s Customised Solutions are an effective tool for the disclosure of prices used for calculating price escalation clauses to customers. Using the Customised Solutions tool, you can track prices, rendering providers’ fees transparent and traceable. Individual data can be published on a white-labelled, customised EEX website which can be made available for all customers of a company.

Commenting on DataSource's Customised Solutions, here is what one of our partners, Christian Hass, CEO at enermarket GmbH, had to say: “If customers want to change their energy provider, they compare the prices available for the different tariffs. Online portals such as enermarket, which is powered by EEX, provide a remedy which clearly displays the offers of the suppliers and greatly simplifies the process.”
EEX Transparency Platform – Increasing offshore capacity for Belgium and the Netherlands

When it comes to renewable power generation, the EEX Transparency Platform continuously increases its coverage and range of services for its customers. We would like to take the opportunity to welcome Eneco Group NV, another leading provider of sustainable energy active in the Benelux countries, to the platform. Eneco Group NV has started the regular publication of inside information regarding the capacity and availability of its offshore wind farms and its gas power stations in Belgium and the Netherlands.

> For further details, please visit our Market Information section.

With the connection of the two wind farms Mermaid and Seastar, the coverage for wind offshore in Belgium has increased by approx. 500 MW. For the Netherlands, Eneco Group NV is adding a total capacity of about 1 GW by connecting the parks Borssele 3&4, Luchterduinen and Princess Amalia to the platform. In the field of power generation from offshore wind, the Netherlands now has the second highest share after Germany (~ 87%) on the EEX Transparency Platform with almost 80% coverage. EEX is continuously strengthening its position as an important data supplier in the field of renewable energies and contributes significantly to the transparency of the European energy markets.
