

GUARANTEES OF ORIGIN AS KEY DRIVER FOR THE ENERGY TRANSITION

Guarantees of Origin (GOs) play a critical role in facilitating investments into renewable energy within the EU, as tradable certificates that track the origin of renewable power.

GOs have been increasing in importance with both supply and demand growing, driven by renewable energy policies and demand from corporations to use GOs as the means to reach decarbonisation targets.

Transparency and trust for market players

Our registry and GO services are central to EEX Group's efforts to support the energy transition through increasing transparency and trust for market players to adopt renewables.

EEX Group integrated GO offering

EEX Group operates across the entire value chain for the GO markets, through its company Grexel, EEX and EPEX SPOT. Registry services, GO auctions and physically-delivered GO futures provide trading participants a comprehensive suite of environmental products and services.
