European Energy Exchange AG

Migration to G-REX
Webinar n°3

08/12/2025

Agenda

- 01 Overview of the Registry Organization**
- 02 API status update**
- 03 First Login and User Management**
- 04 Adding a power plant**
- 05 Issuance**
- 06 Transfer and Export**
- 07 Cancellation**

01 Overview of the Registry Organization

A single point of contact in constant dialogue

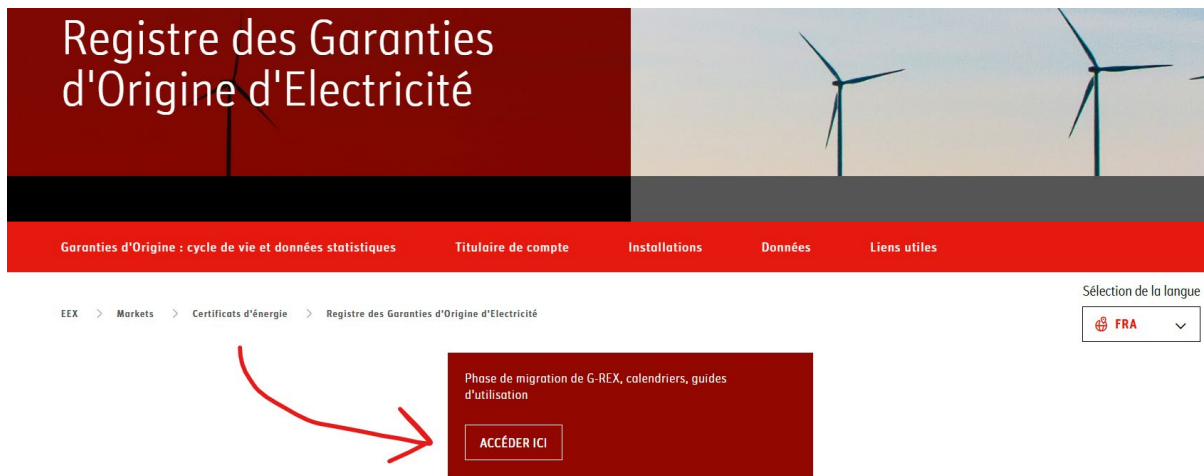

EEX Registry

- **New email go-elec@eex.com** is your unique point of contact for all questions (administrative, regulatory, connection issues, API, etc.) **New phone : 0170874700**
- Internal redirection of topics (Grexel, Business Developer, etc.)

Communication strategy

- Regular emails and customer information
- Website (Admission package and other information)
- Sous-page specific in the context of migration

We remind you that guides are available for:

First connection

User creation and role assignment

Plant registration

Issuance

Transfer

Cancellation

02 API status update

General

- The free access to the test database since July is an exceptional event related to the migration to a new register. This access will end on November 21 → **Extension until 31/12/2025**

- From this date, access to the service is free of charge, but support to account holders is billed according to the contractual conditions in place and the following pricing:
 - Initial instructions for installation (3-hour meeting): €1,500
 - System support, development and consultation beyond the initial configuration: 250 €/h
 - Access to a test platform:
 - for at least 3 months: €1,000/month + €3,000 for the implementation
 - for at least 12 months: €1,000/month + the installation is free

- If you are the same social entity that has already signed a contract for biogas, this also covers the electricity register.

02 API status update

Extensive API documentation

For the G-REX DEMO environments:

- Certificate Creation API: <https://eexfrancedemoapi.grexel.com/certificatecreationapi/v1/>
- Management API: <https://eexfrancedemoapi.grexel.com/managementapi/v2/>
- Master Data API: <https://eexfrancedemoapi.grexel.com/masterdataapi/v2/>
- Private Reports API: <https://eexfrancedemoapi.grexel.com/privatereportsapi/v1/>
- Public Reports API: <https://eexfrancedemoapi.grexel.com/publicreportsapi/v1/>
- Transaction API: <https://eexfrancedemoapi.grexel.com/transactionapi/v1/>

For the G-REX production:

- Certificate Creation API: <https://eexfranceapi.grexel.com/certificatecreationapi/v1/>
- Management API: <https://eexfranceapi.grexel.com/managementapi/v2/>
- Master Data API: <https://eexfranceapi.grexel.com/masterdataapi/v2/>
- Private Reports API: <https://eexfranceapi.grexel.com/privatereportsapi/v1/>
- Public Reports API: <https://eexfranceapi.grexel.com/publicreportsapi/v1/>
- Transaction API: <https://eexfranceapi.grexel.com/transactionapi/v1/>

Read the API Guide carefully, especially section 3.2 related to tokens and their refresh

03 First Login and User Management

General

- Link to user guide : [User creation and role assignment](#)

- Root account holders can only be created by EEX. Check directly with go-elec@eex.com to verify the procedure in each case.

- Root account holders can create roles (they can be cumulated):
 - AH Account Admin
 - AH Account Viewer
 - AH PD Admin
 - AH PD Editor
 - AH PD Viewer
 - AH User Admin

04 Adding a power plant

General

- Link to user guide : [Plant registration](#)
- New mandatory information in order to be able to streamline and improve the exchanges of account holders / registry / DSO-TSO
 - Standardized name of new facilities
 - Always an end date for the mandate (exception for incumbent operator)
 - INSEE code (this is not the postal code)
 - ISDND ISDD CSDU Biogas UIOM CVE UVE Mixed biomass pumping station ACI ACC → special treatment
 - PRM ou Point de comptage si PRM inconnu. Si connaissance des deux ajouter dans description le point de comptage

- Différence par rapport à l'ancien registre ou points d'attention :

- Dans l'onglet « organisation » -> toujours Registrant
- Dans l'onglet « Licence » -> :
 - **Facteur d'allocation** : toujours ajouter 100%
 - Droit à recevoir des GOs -> Répartition (%) : insérer 100%
 - **Organisme droit à recevoir des GOs** : saisir votre organisation
 - **Numéro du compte émetteur** : sélectionner l'un des comptes pour lequel vous souhaitez recevoir les GOs émisent. Vous pouvez créer des sous-comptes dédiés pour des types de centrales (voir guide gestion des comptes)
- Dans l'onglet « compteur » -> champ description = formule de comptage sous le format suivant (9999999999) – (8888888888) – (7777777777)

05 Issuance

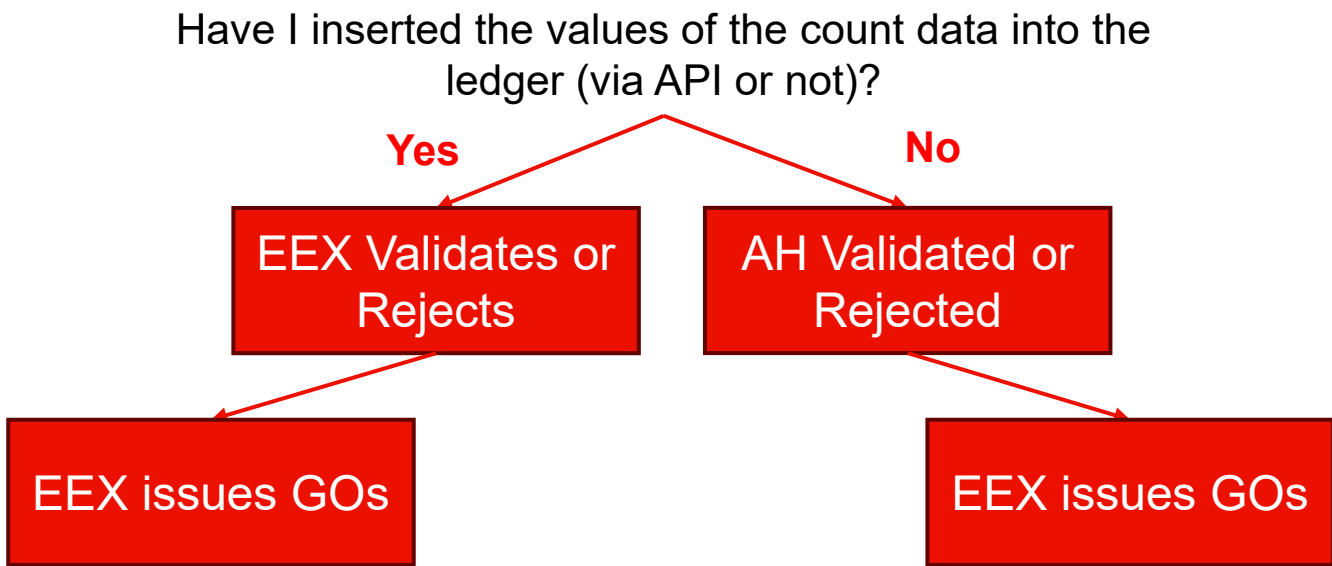

General

- Link to user guide (including standardized excel/csv) : [Issuance](#)

The issuance process within GREX is different from the current registry in interfaces and processes. Important points:

- RTE metering data is automatically inserted by EEX
- Official GRDs counting data should always be sent to go-elec@eex.com via RP12/50/52 and standardized csv/excel file containing PRM
- Ability to add in mass metering data via API or without API for conventional power plants (Solar/Wind/Hydro/Nuclear). In the case of plants with complex processes ACC/complex biomass/pumped, mass import of MR is not recommended
- Inability to drop Metering data files (or any other type of document) into the registry and therefore API commands in this sense will not work

06 Transfer et Export

General

- Link to user guide : [Transfert](#)
- GO exchanges are defined as:
 - Internal transfer (transaction between accounts of the same corporate entity on the register) -> automatic
 - Transfer (transaction between two different corporate entities on the register) -> Requires validation of the receiving counterparty and no EEX validation
 - Export (transaction out of the French registry account to another authorized AIB registry) -automatic > if AIB registry automatically accepts and no EEX validation
 - Import (transaction arriving on the French registry account from another authorized AIB registry) -> automatic and therefore no EEX validation
- To carry out internal transfer / transfer / export, the interface is identical

07 Cancellation

General

- Link to user guide : [Annulation](#)
- Regulatory reminder:
 - The month of production and the month of consumption must always coincide. A holder delivering a green offer to its customer for June 2025 must cover its customer's consumption with June 2025 GOs (which it can issue until November 2025 and cancel until June 2026). (R311-64) → Monthly matching
 - A GO has a lifespan of 12 months and any use (cancellation) is definitive (L314-24)
 - Prefer to cancel your GOs for year N before March 31 of year N+1
- Ability to register beneficiaries allowing you to use recurring information
- Possibility of obtaining [links](#) to transmit used/cancelled GOs to end customers
