Please note:

- 1) The described "Minimum Quantity Size" values, expressed in lots, are the direct result of the thresholds for 'large in scale' transactions (expressed in Euro) as published by ESMA. For the conversion the yearly average prices of the previous year are used.
- 2) According to the ESMA data, different "LIS" thresholds are applicable for different maturity buckets. EEX has implemented that approach by applying different minimum quantity thresholds for different expiries of the same product.
- 3) Only pre-arranged transactions in products required for pre-trade transparency and with a lot size smaller than the „Minimum Quantity Size“ are subject to pre-trade transparency, unless they are marked as 'hedge' transaction
- 4) Minimum Quantity Size = "1" means that the instrument of this maturity bucket is illiquid according to ESMA's calculation results or the published LIS threshold is lower than the nominal value of one contract of this instrument
- 5) Example G3BY: Maturity "1-3" and Minimum Quantity Size = "3" means: the next 3 tradeable calendar contracts are liquid contracts and pre-arranged transactions with a lot size of 1 or 2 would be subject to pre-trade transparency.
