

New Landing Pages for T7 GUI Solutions

Dear Sir or Madam,

Dear Users,

The T7 GUI Landing Pages which used to launch the T7 Admin-, Trader-, and Clearer GUI will be migrated to new servers. Together with the migration there will be minor technical changes and improvements which are outlined in this circular. The main concept for launching T7 GUIs remains unchanged.

All users of the current T7 GUI Landing Pages will need to update their bookmarks and/or links to the T7 GUIs. T7 GUI users with strict firewall rules are requested to verify access to the new servers and amend their firewall rules if needed. All T7 GUI Landing Pages for T7 Production, T7 Simulation and T7 Disaster Recovery are affected regardless of access via Internet or via Leased Line.

Old and new T7 GUI Landing Pages will continue to be available in parallel. Participants will have enough time to perform all required changes before the existing servers will be decommissioned in summer 2022.

The new T7 GUI Landing Pages feature a number of technical improvements as well as enhancements in form and content.

Timeline:

23 February 2022 – The new T7 GUI Landing Pages will be available. The old T7 GUI Landing Pages remain. An information text on the old pages will link to the new pages.

02 May 2022 – The addresses (URLs) of the old T7 GUI Landing Pages will automatically forward to the new T7 GUI Landing Pages.

06 June 2022 – The addresses (URLs) of the old T7 GUI Landing Pages will be decommissioned.

This change affects all users of the T7 GUIs, accessing the T7 GUIs via Internet and via Leased Line in any environment (Simulation, Production, and Disaster Recovery).

Required action/Requirements for participation

Users of the T7 GUI Landing Pages will need to perform the following steps prior to 2 May 2022:

- T7 GUI users accessing the T7 GUI Landing Pages via bookmarks in their web browser will need to update the bookmarks to the new pages
- T7 GUI users accessing the T7 GUI Landing Pages or T7 GUIs via direct links on their desktop will need to update these direct links to point to the new servers
- Companies with strict firewall rules based on individual IP addresses will need to allow access to the new servers

The “look and feel” of each T7 GUI Landing Page remains unchanged and the technical mechanism for starting the T7 GUIs from the Landing Pages (Java WebStart) remains the same.

Details of the initiative

The new T7 GUI Landing Pages feature these improvements:

- Separation of simulation and production pages and links
- Additional menu for easy switching between environments (simulation, production)
- Usage of https instead of http, thereby ensuring encrypted transmission and secure server identification by use of server certificates
- General use of „Fully Qualified Domain Names“ (aka „FQDN“) instead of IP addresses to reference resources
- Consistent URL syntax across all markets and environments

New T7 GUI Landing Pages		
	Internet	Leased Line
Production	https://t7gui.production.eurex.com/xeee	https://t7gui.production.vpn.eurex.com/xeee
Simulation	https://t7gui.simulation.eurex.com/xeee	https://t7gui.simulation.vpn.eurex.com/xeee

New T7 GUI Landing Pages Server IP addresses		
	Internet	Leased Line
Production	193.29.90.182 t7gui.production.eurex.com	193.29.93.169 t7gui.production.vpn.eurex.com
Simulation	193.29.90.183 t7gui.simulation.eurex.com	193.29.93.170 t7gui.simulation.vpn.eurex.com
