

## EEX introduces General Admission

Dear Exchange Participants,

As of 30 September 2024, EEX will switch to a “General Admission” approach for all EEX markets only differentiating between spot market and derivatives markets admission. On your request, the spot market admission can be limited to participation at primary auctions for emission rights (EUA and EUAA) only.

The primary goal of this change is to streamline the product access and maintenance service and simplify the steps required to gain access to EEX markets. This new approach will reduce administrative complexities and offer a shorter market entry time, for instance for product extensions or the launch of new EEX products.

After 30 September 2024, already admitted Exchange Participants will receive an updated admission letter reflecting the new legal setup (i.e., Admission for Derivatives Market / Spot Market / Spot Market restricted to Emission Primary Market only) according to their current admission(s).

Please note that the tradability for all available products is subject to the product set-up at European Commodity Clearing AG (Recognition as Trading Participant). If you wish to trade additional products, you must request them at European Commodity Clearing AG, to make them available for trading. However, financial products included in the selected Membership Package will be granted without additional requirements, once Clearing Member approval is obtained.

The membership fees to be paid depend on the applicable Membership Package as specified in Section 4 of the List of Services and Prices of EEX AG (Price List ([eex.com](https://www.eex.com))). The chosen Membership Package generally determines the applicable annual membership fees.

Please do not hesitate to contact EEX Customer Care or Member Readiness if you have any further questions.

Yours sincerely,
